## IEC Limit Switches Accessories

## Replacement contact blocks

Easily-installed replacement contact blocks fit both heavy-duty IEC and double-insulated limit switches, including mini-DIN models.

Note: Limit switches come standard with snap-action contacts (AGZ1 1-SWITCH.) To replace contact block, remove limit switch cover. Carefully remove old contact block and install replacement. Contact blocks are supplied with an adapter to fit into larger ABM and ABP switches. Remove this adapter when installing contacts in mini-DIN AAP models.

## IEC Limit Switches Bar Charts

## Bar charts

## Limit switch types

Snap action contact: A contact element in which the contact motion is independent of the speed of the actuator. This feature ensures reliable electrical performance even in applications involving very slow moving actuators.
Slow make - slow break contacts: A contact element in which the contact motion is dependent on the actuator speed.

## Terminal identification (IEC)

Each terminal is marked with two digits. The first digit indicates the pole (circuit). The second digit indicates the type of contact.
_1-_2 is N.C., _3-_ 4 is N.O.,
so 11-12, 21-22 are N.C., while 13-14, 23-24 are N.O.

Make-before-break (overlapping) SPDT: the N.O. contact closes before the N.C. contact opens.

Break-before-make (offset) SPDT: the N.C. contact opens before the N.O. contact closes.

Simultaneous make and break SPDT: the N.C. contact opens at the same time as the N.O. contact closes.

| Terminal Markings |  |
| :---: | :---: |
| European |  |
| Terminal No. | Type |
| 11-12 | N.C. contact of pole no. $1^{1}$ |
| 13-14 | N.O. contact of pole no. $2^{1}$ |
| 21-22 | N.C. contact of pole no. $2^{2}$ |
| 23-24 | N.O. contact of pole no. $1^{2}$ |
| ${ }^{1}$ With non-isolated contacts | ${ }^{2}$ With isolated contacts |

= Contact open
$\square=$ Contact closed
$A=$ Max. travel of the operator in mm or degrees
$B=$ Tripping travel of the contact
$C=$ Resetting travel of the contact
$D=$ Differential travel ( $\mathrm{B}-\mathrm{C}$ )
$\mathrm{P}=$ Point from which positive opening is assured
