## Surestep Stepping System Overview

## High-performance microstepping drives with high-torque stepping motors

SureStep stepping systems provide simple and accurate control of position and speed where open-loop control and cost are considerations. Pulses (or "step" and "direction" signals) from the DirectLOGIC family of PLCs or other indexers and motion controllers are "translated" by the microstepping drive into precise movement of the stepping motor shaft. The SureStep stepping motors use 2-phase technology with 200 full steps per revolution or $1.8^{\circ}$ per full step. Older type stepping motor drives, which operate stepping motors in full step mode, can result in stalling or lost motion due to potential problems with low speed mechanical vibration (usually between 100 to 200 RPM). To minimize this vibration problem, the SureStep microstepping drives use advanced microstepping technology to smooth the motor motion and stepping response.

## Standards and Agency Approvals $\mathcal{C}$

How fast can my system go?

| Maximum Potential Specd Chart (rpm) * |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| PLC |  | SureStep Drive Steps/Rev Selection ** |  |  |  |
| Model | Fastest <br> Output | $\mathbf{4 0 0}$ <br> Steps/Rev | $\mathbf{1 0 0 0}$ <br> Steps/Rev | 2000 <br> Steps/Rev | 10,000 <br> Steps/Rev |
| DL05, DL105 | 7 kHz | 1,050 | 420 | 210 | 42 |
| DL06 | 10 kHz | 1,500 | 600 | 300 | 60 |
| H0/H2/H4/T1H <br> -CTRIO | 25 kHz | 3,750 | 1,500 | 750 | 150 |
| H2-CTRI02 | 250 kHz | 37,500 | 15,000 | 7,500 | 1,500 |
| P3-HSO | 1 MHz | 150,000 | 60,000 | 30,000 | 6,000 |
| *T |  |  |  |  |  |

* These speeds are theoretical maximums. See torque curves of specific motors for their rpm limits.
** Full step (200 steps/rev) will allow higher top speed. Full stepping, however, can create vibration at low speed.

The STP-DRV-4035 has selectable microstep resolutions of 400 (half-step); 1,000 (each full step $\div 5$ microsteps); 2,000 $(\div 10)$; or $10,000(\div 50)$.
The STP-DRV-6575 has selectable resolutions of 200 (full-step); 400 (half-step); 2,000; 5,000; 12,800; or 20,000 steps per revolution.
The advanced drives (STP-DRV-4805, STP-DRV-80100) have software-selectable resolutions ranging from 200 (full step) to $51,200(\div 256)$ steps per revolution.
The advanced drives can operate with traditional high-speed inputs, but can also be commanded via $0-5 \mathrm{~V}$ analog input. They have an internal indexer that can accomplish point-to-point moves controlled via ASCll communication.

## FREE configuration software!

SureStep Pro configuration software is available that makes setting parameters a snap for the advanced drives (STP-DRV-4850 \& STP-DRV-80100)! Download free from our website:
http://support.automationdirect.com/products/surestep.html

Stepping Motor RPM $=(A \div B) \times(60$ seconds/minute $)$
Where: $\quad A=$ PLC output frequency (pulses per second)
$B=$ microstepping resolution selection (steps/revolution)

| Maximum RPM = |  | Steps/Sec <br> A |  | Steps/Rev <br> B |  | Sec/Min |

## Four components to make a complete system

Choose a drive, motor, motor extension cable and power supply

## Surestepstepping System Overview

## Stepping System : Head to Head

AutomationDirect USa Competition
Hey - I can do the math! - AutomationDirect
A complete 2-axis SureStep ${ }^{\text {rw }}$ Stepping System for less than just the competition's stepping drives.

## High-torque stepping motors with 1-ft. cable and 4 -wire locking connector

The SureStep stepping family has twenty high-torque motors to handle a wide range of automation applications such as woodworking, assembly, and test machines. The motors are available in both single-shaft and dual-shaft configurations. Our square frame or "high-torque" style stepping motors are the latest technology, resulting in the best torque to volume. We have NEMA 17, 23, and 34 mounting flanges and holding torque ranges from 61 to 1288 oz in. Optional 20 -foot extension cables with locking connectors are available to interface any of the stepping motors to the microstepping drive. The extension cables can be easily cut to length, if desired.

Holding Torque (oz•in)
High Torque Motors (MTR)

Holding Torque (oz-in)

## High-performance microstepping drive

## SureStep microstepping drives <br> (STP-DRV-4035 \& STP-DRV-6575)

- Two models available
- Standard high-speed pulse input (pulse and direction)
- On-board or removable screw terminals for easy hook-up
- Optically-isolated inputs ready for +5VDC logic from DirectLOGIC PLCs, or 5-24 VDC (depending on model).
- No software or add-on resistors required for drive configuration; dipswitch and/or rotary-dial set-up
- Dipswitch used for built-in self-test, microstep resolution selection, current level selection, and optional idle current reduction.

## SureStep advanced microstepping drives (STP-DRV-4850 \& STP-DRV-80100)

## All the features of the high-performance drive, plus:

- Software configurable
- 200-51,200 microsteps (software selectable)
- High-speed pulse input (Quadrature, cw/ccw, pulse/direction)
- Analog velocity mode (0-5v or potentiometer)
- Internal indexer (point-to-point moves via ASCII command)

## Linear power supplies

- 32V @ 4A, 48V @ 5A, 48V @ 10A, 70V @ 5A
- Input and output fuses included on power supplies
- Includes 5 VDC Logic supply for all low voltaģe siģnals

## Surestep. Choose your SureStep System

## 1. Choose a motor

Determine the torque and speed required by your application. Then look at the motor speed-torque curves in the "SureStep Stepping System Motors" section of this catalog chapter. Choose a motor that can run your application with plenty of speed and torque reserve (most stepper systems should have a 100\% safety margin for torque).

NEMA 17, 23 and 34 mounting flanges

Twenty bipolar step motors to cover a wide range of applications

Holding torque ranges from 61 to 1288 0z.in

Square frame style produces high torque and achieves best torque to volume ratio

## 2. Choose a motor extension cable

Our 20-ft motor extension cables have a locking connector that mates up to the motor cable. The extension cables allow you to quickly connect the motor to the drive without having to splice wires or cut any cables. If you chose an STP-MTR-xxxx motor, select an STP-EXT-020 cable.
If you chose an STP-MTRH-xxxx motor, select an STP-EXTH-020 cable.
(The "H" motors and cable can handle higher motor current)

## 3. Choose a drive

This chart is a quick selection guide. For a full list of features, check out the Technical Info later in this chapter.

| What you need | STP- <br> DRV- <br> 4035 | STP- <br> DRV- <br> 4850 | STP- <br> DRV- <br> 6575 | STP- <br> DRV- <br> $\mathbf{8 0 1 0 0}$ |

## ...in 4 easy steps

## 4. Choose a power supply

Since all SureStep motors can operate at $32 \mathrm{~V}, 48 \mathrm{~V}$, and 70 V , the selection of a power supply is dependent on the selected speedtorque curve of the motor and on the selection of drive. Choose a power supply that matches the desired speed-torque curve
and stays within the voltage limit of the selected drive. Each power supply has incoming AC and outgoing DC fusing. There is also an electronically overload protected 5 V supply for all your logic needs.

Permissible Drive/Power Supply Combinations

| - | Power Supply |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| Drive | STP- | STP- | STP- | STP- |
|  | PWR- | PWR- | PWR- | PWR- |

## SureStep stepping system includes:

- Four step motor power supplies
- Two DIP-switch configurable microstepping drives
- Two software configurable advanced microstepping drives
- Two motor extension cables
- Twenty step motors (NEMA 17, 23, 34 frame sizes; single \& dual shaft)

## Standard stepper drive features

(STP-DRV-4035 \& STP-DRV-6575)

- Low cost, digital step motor driver in compact packaģe
- Operates from Step \& Direction signals, or Step CW \& Step CCW (jumper selectable)
- Fault output (-6575 only) \& Enable input
- Optically isolated I/O
- Digital filters prevent position error from electrical noise on command signals; jumper selectable: 150 kHz or 2 MHz (-6575 only)
- Rotary or DIP switch easily selects from many popular motors
- Electronic damping and anti-resonance (-6575 only)
- Automatic idle current reduction to reduce heat when motor is not moving; switch selectable: $50 \%$ or $90 \%$ of running current
- Switch selectable step resolution: (-DRV-4035) 400-10,000 steps per revolution; (-DRV-6575) 200-20,000 steps per revolution
- Switch selectable microstep emulation provides smoother, more reliable motion in full and half step modes
- Automatic self test (switch selectable)
- Operates from a 24-65 VDC or 12-40 VDC power supply, depending upon model
- Running current from 0.5-7.5A

## Advanced stepper drive features

(STP-DRV-4850 \& STP-DRV-80100)

- Max 5A, 48 V and max $10 \mathrm{~A}, 80 \mathrm{~V}$ models available
- Software configurable
- Programmable microsteps
- Internal indexer (via ASCII commands)
- Self test feature
- Idle current reduction
- Anti-resonance
- Torque ripple smoothing
- Step, analog, \& serial communication inputs
- Serial communications allow point-to-point positioning

## Motor features

- High torque, 2 -phase, bipolar, $1.8^{\circ}$ per step, 4 -lead
- Available in single-shaft and dual-shaft models
- Connectorized
- (6) NEMA 17 motors
- (6) NEMA 23 motors
- (8) NEMA 34 motors

## Power supply features

- Linear, unregulated DC power supplies
- 120/240 VAC selectable input
- $32 \mathrm{~V}, 48 \mathrm{~V}, 70 \mathrm{~V}$ DC output models available
- All models have additional 5VDC, 500 mA regulated logic supply
- Fusing included for both incoming AC and outgoing DC
- 5 V supply has electronic overload protection

Typical Wiring Diagram

Surestep Power Supply / Drive Compatibility

1) Do NOT use a power supply that exceeds the drive's input voltage range. If using a non-STP linear power supply, ensure that the unloaded voltage does not float above the drive's maximum input range.
2) For best performance, use the lowest voltage power supply that supplies the required speed and torque.

| SureStep Drive / Motor Compathility |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Motor ${ }^{(1)(2)}$ |  |  | Recommended Drive ${ }^{(1)}$ |  |  |  |

## Sure step $^{\circ}$ Stepping System Drives

## SureStep ${ }^{\circledR}$ Advanced Microstepping Drives

# Sure $_{\text {step }}{ }^{\circ}$ Stepping System Drives <br> SureStep ${ }^{\circledR}$ Microstepping Drives Accessories 

## Braking Accessories

If you plan to use a regulated or switching power supply, you might encounter problems from regeneration. As a load rapidly decelerates from a high speed, much of the kinetic energy of that load is transferred back to the motor. This energy is then pushed back to the drive and power supply, resulting in increased system voltage. If there is enough overhauling load on the motor, the DC voltage will go above the drive and/or power supply limits.
This can trip the overvoltage protection of a switching power supply or a drive, and cause it to shut down.
To solve this problem, AutomationDirect offers a regeneration clamp and a braking resistor as optional accessories. The regen clamp has a built-in 50W braking resistor. For additional braking power (larger overhauling loads), an optional 100W braking resistor is also available.

## Regeneration Clamp Description

As with most stepper systems, a clamp circuit is often required to limit increased power supply bus voltage when the motor is decelerating under load. This is commonly referred to as "regeneration," which is what happens when DC motors are driven by their load. During regeneration, the DC motor can produce enough voltage to actually exceed the input power supply voltage.
With a Regen Clamp, one or more stepper drives can be protected from "Over Voltage" conditions by placing the clamp module between the power supply and the drive. The clamp tracks the input power supply, and will operate from 24 to 80 volts. No adjustments are needed.
The Regen Clamp is designed to handle a wide range of conditions. The voltage input matches the needs of the SureStep stepper drives by providing 24 to 80 VDC capabilities, and external power resistors can be added for even greater continuous power requirements. The clamp modules are small and compac $\dagger$ to minimize impact on the system design. More than one stepper drive can be connected to the clamp module with the potential to handle an entire multi-axis sytem.

Regeneration Clamp

## Braking Resistor

## Regeneration Clamp Features

- Built-in 50W power resistor for more continuous current handling (optional 100 W resistor is also available)
- Mounted on a heat sink
- Voltage range: 24-80 VDC; no user adjustments required
- Power: 50W continuous; 800W peak
- Wire connection: 6-pin screw terminal block; 12-18 AWG wire.
- Indicators (LED):

Green = power supply voltage is present
Red = clamp is operating (usually when stepper is decelerating)

- Protection: The external power supply is internally connected to an "Input Diode" in the regen clamp that protects the power supply from high regeneration voltages. This diode protects the system from connecting the power supply in reverse. If the clamp circuit fails, the diode will continue to protect the power supply from over-voltage.
- RoHS

Sure Step Series Specifications - Mierostepping Drives Optional Accessories

| Part Number | Price | Description |
| :--- | :---: | :--- |
| STP-DRVA-RC-050 * | $\$ 99.00$ | Regen Clamp: use with DC-powered stepper \& servo drives; 50W, 24-80 VDC |
| STP-DRVA-BR-100 | $\$ 49.00$ | Braking Resistor: use with STP-DRV-RC-050 regen clamp; 100W, $10 \Omega$ |
| *Do not use the regeneration clamp in an atmosphere containing corrosive gases. |  |  |

## SureStep ${ }^{\circledR}$ Microstepping Drives Accessories

## SureStep Pro Drive Configuration Software - for Advanced Stepper Drives

## Free Download

SureStep Pro configuration software is available as a free download from our website for SureStep advanced drives (STP-DRV-4850 \& -80100).

- Used for easy configuration and setup of the drive, including drive, motion control mode, I/O, motor.
- Serial command languaģe for motor drive control via serial port; eliminates the need for separate motion controllers or indexers; provides easy interface to other industrial devices such as PCs, PLCs and HMIs.
- Easily use the ASCII output commands from most of our PLCs to enable indexing capability.
- Help files include technical data, application information, advanced setup, serial command instructions.
- Runs on 32-bit/64-bit Windows 7 and XP operating systems.

## An Extensive Lineup of Products

Starting with the enclosure, we carry everything you need to build an electrical control system, right down to the wire and tools. And we have the devices that go in the panel, such as logic controllers, HMI, drives, relays, and motor controls. If you're maintaining existing systems, we've got great prices on MRO parts such as circuit breakers, fuses, motors, pneumatics and pilot devices. In addition to our catalog all our products are available to order 24/7 at www.automationdirect.com.

## Value Pricing

Our everyday prices on industrial control products are well below the list prices of more traditional automation companies because, with our direct business model and focus on high efficiency, AutomationDirect has the lowest overhead in the industry. We pass the savings on to you by offering high-quality products at low prices.

## FREE Award Winning Support

Almost 99\% of AutomationDirect customers responding to surveys say they would recommend us to someone else, and they do! And we've been voted tops in service by independent magazine surveys 14 years running.

## FREE \& Fast Shipping*

The majority of our products are stocked for same-day shipping, when you place your order by 6 p.m. EST.

* Same day shipping with approved company credit or credit card. Free 2-day (transit) shipping for orders over \$49; other expedited services extra.
See Web site or catalog Terms and Conditions for all details and exceptions.

| Agency Approvals |  | CE (complies with EN55014-1 (1993) and EN60034-1.5.11) |  |  |  |  |  |  |  |  |  |
| Design Tips |  | Allow sufficient time to accelerate the load and size the step motor with a $100 \%$ torque safety factor. DO NOT disassemble step motors because motor performance will be reduced and the warranty will be voided. <br> DO NOT connect or disconnect the step motor during operation. <br> Mount the motor to a surface with good thermal conductivity, such as steel or aluminum, to allow heat dissipation. <br> Use a flexible coupling with "clamp-on" connections to both the motor shaft and the load shaft to prevent radial and thrust loading on bearings from minor misalignment. |  |  |  |  |  |  |  |  |  |
| Accessory Extension Cable |  | STP-EXT-020 |  |  |  |  |  | STP-EXTH-020 |  |  |  |
| * For dual-shaft motors (STP-MTR-xxxxxD): <br> The sum of the front and rear Torque Loads, Radial Loads, and Thrust Loads must not exceed the applicable Torque, Radial, and Thrust load ratings of the motor. |  |  |  |  |  |  |  |  |  |  |  |

## Linear Motion Slides and Components

The three SureMotion families of linear slide actuators easily mate to SureStep motors and other NEMA motors. Everything you need to mount your SureStep motor is included!
These units are an excellent solution for many applications such as pick and place, packaging, assembly automation and other motion control operations.

## 18 models, with travels <br> from 6 to 36 inches <br> Ready to mount NEMA 17, 23 or 34 motors

## Sure Linear Motion Products <br> Product Overview

## Actuator Overview

SureMotion linear motion offers both motor-ready actuator assemblies, and a nice assortment of sliding components and accessories to provide a wide variety of motion control solutions.

## Sure Linear Motion Products <br> Twin Round Shaft Slide Actuators

LARSD2-08T12BP2C

## Features

- High-accuracy ball screw
- Continuously-supported ģuide rails
- Replacement components available
- Ready for NEMA 23 motor
- AISI 1566 Carbon Steel, 60 RC Round Shafts
- AISI 1045 Carbon Steel, 56 RC Ball Screw

## Description

Continuously-supported round rail slide with ball screw actuation provides a very robust precision linear motion. Units are complete except for a drive motor.

## Applications

- Positioning systems
- Heavy loads

| Twin Round Shaft Slide Actuator Specifications |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Part Number | Price | Drive <br> Type | Drive Pitch | Drive Screw Efficiency (\%) | Payload Inertia Factor (in²) | Constant System Inertia (lb $\mathrm{m}^{-i n^{2}}$ ) | Travel | Weight (lb) | Fits Motor |
| LARSD2-08T12BP2C | \$2,399.00 | Ball screw | 0.2 in | 90 | 0.001 | 0.11 | 12in | 10.5 | NEMA 23 |
| LARSD2-08T24BP2C | \$2,589.00 |  |  |  |  | 0.16 | 24in | 14.0 |  |

## System Inertia Calculation:

To calculate the inertia reflected to the motor in a particular actuator, multiply the carriage payload by the payload inertia factor and then add the constant system inertia value for that actuator. The constant system inertia value for each system includes the inertia of the shaft coupler, carriage, and lead/ball screw.

- The payload must be in units of $\mathrm{lb}_{\mathrm{m}}$.

* Repair kits and NEMA 23/34 motor adapter contain replacement components that are the same as the original components in the actuator assemblies.

## Sure Linear Motion Products Compact Slide Actuators <br> Description

Self-contained linear actuator designed for light loads in harsh or wet conditions in a very small package. A stainless steel lead screw is embedded in a hard-coated aluminum shaft specially machined to match sliding elements.

## Applications

- Space-limiting applications
- Harsh or wet environments
- Light loads
- Speeds up to 20 inches per second
- AISI 6061-T6 Aluminum Alloy, Hard Anodized Slide Shaft. Hard Anodizing Depth .0005-.004, 60-65 RC
- AISI 303 Stainless Steel Lead Screw
- Compact design
- Replacement components available
- Ready for NEMA 17 motor
- End-of-travel switch mounts

## Sure Linear Motion Products Value Linear Slide Actuators <br> Description

Low-cost linear actuator using the latest in sliding element technology; hard-coated aluminum guide shafts. This versatile unit can be mounted horizontally, vertically, or inverted without loss of load capacity.

LAVL-60T06LP2

## Features

- Small footprint
- Adjustable carriaģe pre-load
- Hard-coated aluminum slides
- Replacement components available
- Ready for NEMA 17 motor
- End-of-travel switch mounts

- AISI 6061-T6 Aluminum Alloy, Hard Anodized Slide Shaft. Hard Anodizing Depth .0005-.004, 60-65 RC
- AISI 304 Stainless Steel Lead Screw

## Applications

- Harsh or wet environments
- X-Y-Z positioning systems

# Learn our products for free! 

AutomationDirect's YouTube channel, $\underline{\text { www.youtube.com/automationdirect, is expanding rapidly with content that falls into three distinct }}$ categories. (Videos are also available at www.automationdirect.com/videos.)

## Quick and Easy How to Videos

"How to" product focused tutorials serve up short (two to five minute) snapshots that give specific guidance on using products, particularly ones with programming software. You'll find over 80 videos on C-more micro touch panel configuration, and many newly posted topics for the Do-more and Productivity3000 controllers, including MATH and DATA instructions, as well as the high-speed counter I/O modules.

## In-depth Product Tutorials

More in-depth video series take you from zero to detailed knowledge on a host of popular topics. These series may contain up to 15 videos, leading you through the basics of PLCs, motion control, and process (PID) control, using AutomationDirect products integrated into demonstration systems that relate to real applications.

## Learn About New Products

"Kickstart" videos are shoı overviews focusing on newl introduced products - you'll see th parts, learn the basics of the feature and applications, all in just a feı minutes. They're perfect for gettin the highlights of what's new fror AutomationDirect.

Rely on our experts and learn at your convenience: www.automationdirect.com/videos

## NEMA Planetary Gearboxes

The SureGear PGCN series easily mates to SureStep motors, and other NEMA frame motors. Everything you need to mount your SureStep motor is included!
It is the perfect solution for applications such as material other motion control applications requiring a NEMA handling, pick and place, automation, packaging, and input/output interface.

15 models, five gear ratios available in NEMA 17, 23 and 34 frame sizes

Tough on the outside, precision quality on the inside

## Sure

## SureGear ${ }^{\circledR}$ Planetary Gear Reducers for NEMA Motors - Overview

The SureGear PGCN series is a great gearbox (gear reducer) value for servo, stepper, and other motion control applications requiring a NEMA size input/output interface. It offers the best quality available for the price point.

## Features

-Wide range of ratios ( $5,10,25,50$, and $100: 1$ )

- Low backlash of 30 arc-min or less
- 20,000 hour service life
- Maintenance free; requires no additional lubrication
- NEMA sizes 17,23 , and 34
- Includes hardware for mounting to SureStep stepper motors
- Optional shaft bushings available for mounting to other motors

Applications

- Material handling
- Pick and place
- Automation
- Packaging
- Other motion control applications requiring a NEMA input/output

## Sure servo AC Servo Systems

## SureServo ${ }^{\circledR}$ AC servo systems

The SureServo family of brushless servo systems from AutomationDirect is fully digital and offers a rich set of features at dynamite prices. Choose from eight standard servo motors that are used in combination with one of three standard servo drives.

- Eight standard systems from 100 W to 3 kW
- Use with any AutomationDirect PLC; or any other host controller
- Drives feature on-board indexer and adaptive tuning modes
- Free setup software
-30-day money-back guarantee
- Two year warranty

## Why use a servo?

The SureServo servo systems provide the highest possible level of performance for precise control of position, velocity, and torque. Compared to lower cost stepping systems, the SureServo products provide:

- More torque at higher speeds (up to $5,000 \mathrm{rpm}$ )
- Broader range of power (up to 3 kW )
- Higher response with closed-loop control (high hit rate without stalling or lost position)

## SureServo family

The SureServo family is designed for flexibility and quick implementation. SureServo drives accept a wide range of command sources:

- Built-in motion controller w/preset position, velocity or torque
- Select presets with switch inputs and/or the multi-drop Modbus serial interface
- Position commands with "pulse and direction" or "count up and down" format
- Analog voltage Velocity or Torque command

For configuration, tuning and diagnostics, use the drive's integrated keypad / display or take advantage of the free SureServo Pro ${ }^{\circledR}$ PC-based software. Tune the system easily with adaptive auto-tuning selections or a manual mode.
Adapt to diverse applications with configurable I/O, including eight digital inputs, five digital outputs, two analog monitors and a scalable encoder output.

## Sure servo AC Servo Systems

 3 Standard Drives ... 8 Standard Motors ... 100W to 3kW over 50 gearboxes (both inline and right angle) with four ratioCompany Information

## Drive features

- Main Power and Control Power Inputs
- Main Power: 230 VAC 1-phase/3-phase ( 2 kW and 3 kW systems are 3-phase only)
- Control Power: 230 VAC Single Phase; $50 / 60$ Hz
- Fully digital with up to $\mathbf{4 5 0} \mathbf{~ H z}$ velocity loop response
- Easy setup and diagnostics with built-in keypad/display or the SureServo Pro PC-based software
- Five-in-one command options include:
- $\pm 10 \mathrm{~V}$ torque or velocity command
- Pulse train or master encoder position command (accepts line driver or open collector) with electronic gुearing
- Built-in indexer for position control using 8 preset positions and/or position setpoint with serial Modbus
- Tuning aids include inertia estimation and easy tuning for up to 10 levels of response
- Optically isolated digital inputs (8) and outputs (5), analog outputs for monitor signals (2), and line driver output for encoder (with scalable resolution)

## SureServo tuning technology

The SureServo drive closes the loop on current, velocity, and position (depending on control mode selection). Proportional gain, integral gain, feed forward compensation, command low pass filter, and a notch filter for resonance suppression are available. There are three tuning modes:

1. "Manual Mode" for user-defined adjustments
2. "Easy Mode" for default settings over a wide range of programmed inertia with 10 response levels
3. "Auto Mode" for automatic adjustment using an estimated (or measured) value of inertia

## SureServo built-in motion controller

While the SureServo drives can accept traditional commands from host controls, they can also provide their own internal motion control. For example, up to eight index moves can be pre-defined and stored in the drive and then selected and executed using up to three discrete inputs. The predefined index profiles can also be changed via serial communications. The motion can be incremental or absolute (homing routines are available in the drive) and acceleration can be linear or S-curve.
Multiple drives can be daisy-chained and addressed separately using the drive's serial port. This allows very simple yet powerful control of multi-axis processes that do not need precise path control but only precise starting and stopping points. Applications include press feeds, auger fillers, rotary tables, robots for pick and place, test or assembly operations, drilling, cutting, tapping, and similar applications using simple index moves for single or multi-axis motion.

## SureServo <br> Optional Holding Brake

Each SureServo motor can be ordered with an optional 24VDC spring-set holding brake that holds the motor in place when power is removed.

## SureGear® Precision Gearboxes for Servo motors

 Inertia balancing issue in your design?The SureGear PGA series easily mates to SureServo motors. Everything you need to mount your SureServo motor is included!

- Four gear ratios available ( $5,10,15,25: 1$ )
- Mounting hardware included for attaching to SureServo motors
- Industry-standard mounting dimensions
- Thread-in mounting style
- Best-in-class backlash (5 arc-min)
- 5-year warranty

## Sure servo AC Servo Systems

## Iraditional Commanal Sources

## Built-in Indexer (Point-to-Point Position Control)

## Sure servo $_{\sim}$ AC Servo Systems

## How to select and apply SureServo systems

The primary purpose of the AC servo system is to precisely control the motion of the load. The most fundamental considerations in selecting the servo system are "reflected" load inertia, servo system maximum speed requirement, servo system continuous torque requirement, and servo system peak torque requirement. In a retrofit application, select the largest torque SureServo system that most closely matches these parameters

## 1. "Reflected" load inertia

The inertia of everything attached to the servo motor driveshaft needs to be considered and the total "reflected" inertia needs to be determined. This means that all elements of any mechanical transmission and load inertia need to be translated into an equivalent inertia as if attached directly to the motor driveshaft. The ratio of "reflected" load inertia to motor inertia needs to be carefully considered when selecting the servo system.
In general, applications that need high response or bandwidth
for the system being replaced. In a new application, these parameters should be determined through calculation and/or measurement.

AutomationDirect has teamed with Copperhill Technologies to provide free servo-sizing software. "VisualSizer-SureServo" software will assist in determining the correct motor and drive for your application by calculating the reflected load inertia and required speed and torque based on the load configuration. "VisualSizer-SureServo" software can be downloaded from www. sureservo.com/downloads.htm.
Information for selecting SureServo systems is also included in Appendix B of the SureServo User Manual, which can be downloaded from the AutomationDirect.com website.
will benefit from keeping the ratio of load inertia to motor inertia as low as possible and ideally under 10:1. Systems with ratios as high as 200:1 can be implemented, but corresponding lower bandwidth or responsiveness must be accepted. The servo response including the attached load inertia is determined by the servo tuning. SureServo systems may be tuned manually, adaptively with measurement of the load inertia, or set with default tuning based on a programmed value of load inertia.

## 2. Torque and speed

With knowledge of the motion profile and any mechanical transmission between the motor and load, calculations can be made to determine the required servo motor continuous torque, peak torque, and maximum motor speed. The required amount of continuous torque must fall inside the continuous operating region of the system torquespeed curve (you can check the continuous torque at the average speed of the motion profile). The required amount of peak torque must also fall within the servo system's intermittent operating region of the system torque-speed curve (you need to check this value at the required maximum speed).

## Sure servo $_{\sim}^{0}$ AC Servo Systems

## Application tip coupling considerations

The SureServo motors have keyless shafts that are designed for use with clamp-on or compression style couplings. Couplings using keys and/or set screws should NOT be used with SureServo motors as they are likely to come loose or damage the motor shaft. "Servo-grade" clamp-on or compression style couplings are usually the best choice when you consider the stiff-
ness, torque rating, and inertia. Higher stiffness (lb-in/radian) is needed for better response but there is a trade-off between the stiffness and the added inertia of the coupling. Concerning the torque rating of the coupling, use a safety factor of 1.25 over the SureServo peak torque requirement of your application.

## Coupling Suppliers: www.sureservo.com/couplingconsiderations.htm

## Mechanical transmissions

Common mechanical transmissions include leadscrews, rack \& pinion mechanisms, conveyors, gears, and timing belts. The use of leadscrew, rack \& pinion, or conveyor are common ways to
translate the rotary motion of the servo motor into linear motion of the load. The use of a speed reducer such as a gearbox or timing belt can be very beneficial as follows:

## 1. Reduction of reflected load inertia

As a general rule, it is beneficial to keep the reflected load inertia as low as possible while using the full range of servo speed. SureServo systems can go up to 5,000 rpm for the low inertia motors and up to $3,000 \mathrm{rpm}$ for the medium inertia motors.
Example: A gearbox reduces the required torque by a factor of the gear ratio, and reduces the reflected load inertia by a factor of the gear ratio squared. A 10:1 gearbox reduces output speed to $1 / 10$, increases output torque 10 times, and decreases reflected inertia to $1 / 100$.
However, when investigating the effect of different speed reduction ratios DO NOT forget to include the added inertia of couplings, gearbox, or timing belt pulleys. These added inertias can be significant, and can negate any inertia reduction due to the speed reduction.

## 2. Low speed and high torque applications

If the application requires low speed and high torque then it is common to introduce a speed reducer so that the servo system can operate over more of the available speed range. This could also have the added benefit of reducing the servo motor torque requirement which could allow you to use a smaller and lower cost servo system. Additional benefits are also possible with reduction in reflected inertia, increased number of motor encoder counts at the load, and increased ability to reject load disturbances due to mechanical advantage of the speed reducer.

## 3. Space limitations and motor orientation

SureServo motors can be mounted in any orientation, but the shaft seal should not be immersed in oil (open-frame gearbox, etc.). Reducers can possibly allow the use of a smaller motor or allow the motor to be repositioned. For example, some reducers would allow for in-line, right angle, or parallel mounting of the motor. For more information, refer to the website listed below.

## Ordering guide instructions

The following four pages are your ordering guide for the eight standard SureServo systems. Each of the eight standard systems has a torque-speed curve including the motor inertia for reference. This is the fundamental information that you need to select the servo drive and matching motor for your application.

## Don't forget the cables and ZIPLink break-out board kit!

Included in the ordering guide are the available connection cables from the drive to motor in standard lengths from 10 to 60 feet. The break-out board kit includes a 0.5 m ( 19 inch) cable for the CN1 I/O interface, and is listed for your convenience. We highly recommend all five items per system as a minimum. All cables are $100 \%$ factory tested to make your system installation as easy and quick as possible. See the Accessories section for regeneration resistors, AC line filters, fuses, contactors, and RF noise filters.

## Sure servo $_{\text {AC Servo System Software }}$

## SureServo Pro configuration software

SureServo Pro is an optional free downloadable configuration software package for the SureServo drives. With SureServo Pro installed, the personal computer may be directly connected to the servo drive's serial port via the PC's RS-232 serial port*. A six-foot configuration cable (SVC-PCCFG-CBL, \$18.00) is available to make the connection between the drive serial port and PC DB-9 serial port simple.
*Note: Use our USB-RS232 converter cable in conjunction with the SVC-PCCFG-CBL cable on PCs having only USB ports.

## Features

- Quick Start - The basic setup when you have limited time and just want to get up and running ASAP.
- Maintenance keypad allows the user to operate the servo system from the PC. This is a great aid during start-up to allow the servo to perform some basic motion and to check the I/O.
- Detailed - The complete setup for all the drive parameters
- Tune and check the servo response live using the scope feature.
- Upload and download the drive setup. Save the drive setup as a file for future use.
- Edit the drive setup
- View all drive faults
- Trend drive variables in real time

## System Requirements

- Windows 7, Windows 2000, XP Pro
- 24 MB of RAM
- 16 MB hard disk
- RS232 serial port or USB port
- Internet Explorer 4.0 or higher (for HTML help support)

## Parameter views

The SureServo Pro configuration tool logically organizes over 165 servo drive parameters into five tabbed groups. Each parameter has a factory default that usually allows the servo to run "out-of-the-box".
The parameters can be easily changed with available options or setting ranges displayed. Tuning modes and parameters can also be changed using SureServo Pro. After the parameters have been defined, the complete setup can be stored and archived. Drive configurations can be uploaded, edited, saved, and downloaded as often as necessary.

Parameter View Example Screen - Basic Parameters

| SV-PRO | Free | SureServo Pro configuration software for use with all SureServo servo systems. <br> FREE download from www.sureservo.com or www.automationdirect.com websites. |
| SV-PRO | $\$ 9.00$ | CD with SureServo Pro configuration software |
| SVC-PCCFG-CBL | $\$ 18.00$ | Six-foot RS-232 communications cable; connects servo drive serial port to PC DB-9 serial port. <br> For PCs having only USB ports, use our USB-RS232 converter cable in conjunction with the SVC-PCCFG-CBL cable. |
| SVC-485CFG-CBL-2 * | $\$ 10.00$ | ZIPLink SureServo amplifier configuration cable, 6-pin IEEE 1394 connector to RJ45 connector, shielded, twisted pair, 2.0 meter (6.6 t.) length. <br> Use this cable in conjunction with our USB-485M serial adapter to connect any SureServo amplifier to a PC. Eliminates the need to reprogram net- <br> worked servo drives from RS485 to RS232 when connecting to a PC. |
| * Refer to the ZIPLinks Wiring Solutions section for complete information regarding ZIPLink cable SVC-485CFG-CBL-2. |  |  |

## Sure servo AC Servo System Software

## SureServo Pro configuration software Parameter views (continued)

## Parameter View Example Screen - Monitor Parameters

Parameter View Example Screen - Extended Parameters

Parameter View Example Screen - Communication Parameters

## Maintenance screen

A maintenance keypad allows the user to operate the servo system from the PC. This is a great aid during start-up to allow the servo to perform some basic motion and to check the I/O.

## Scope

SureServo Pro includes a powerful scope function that allows the user to have as many as three channels of data displayed simultaneously. Each channel has a drop-down table to select the data to be displayed. The scope also has a trigger mode and timebase selection. This function is a valuable tool for tuning SureServo drives.

# Sure $\underset{\text { servo }}{\text { AC Servo Drive Specifications }}$ 

Servo drive overview

LED Display
The LED display has 5 full digits and is used to indicate servo status and alarms

Keypad
Five Function keys:
MODE: Press to select or change mode
NEXT: Press to shift left
UP: $\quad$ Press to increase values
DOWN: Press to decrease values
ENTER: Press to enter value

## I/O Interface

50-pin connector for interfacing the host controller (such as DirectLOGIC PLC) and other types of I/O signals.

Use our ZIPLink kit which provides DINrail mounted screw terminals for easy connection.

- Command inputs:

\author{

- Pulse and Direction <br> - Encoder Follower
}
- Analog Velocity/Torque
- (8) Digital Inputs
- (5) Digital Outputs
- (2) Analoģ Monitors
- Encoder Output (scalable)

Motor Output Terminal The servo motor power cable is connected to $\mathrm{U}, \mathrm{V}$ and W . Use our factory made and tested cables available in 10, 20, 30 or 60 foot lengths for easy connection.

## Regenerative

Resistor Terminal

1. When the internal regenerative resistor is used, the $P$ and $D$ terminal are connected together while the $P$ and $C$ connection is left open.
2. When an external regenerative resistor is used, it is connected across the P and C

$$
A+, A-, B+B-, Z+Z-
$$

## Encoder Interface

20-pin connector for interfacing the servo motor encoder. Use our factory-made and tested cable available in 10, 20, 30 or 60 foot lengths for easy connection.

## Serial Communication

Interface
6-pin RS-485/422/232 interface to personal computer with SureServo Pro setup software or host controller with Modbus RTU/ASCII protocol. Use our factory-made cables for easy connection to the PC or the host controller.
terminals while the $P$ and $D$ connection is left open. Use our factory approved resistors for "sure" results.

## SureServo systems run "out-of-the-box"... but may be reconfigured for many applications!

The SureServo drives are fully digital and include over 165 programmable parameters. For convenience, the parameters are grouped into five categories:

1) Monitor parameters
2) Basic parameters
3) Extended parameters
4) Communication parameters
5) Diagnostic parameters.

All parameters have commonly used default values which allow you to operate the SureServo system "out-of-the-box". However, the programmability and large variety of parameters make the SureServo systems suitable for a very broad range of applications, including almost all types of general purpose industrial machinery such as assembly, test, packaging, machine tool, and robotics.

## Sure servo AC Servo Drive Specifications

Servo drive specifications

| Cencral Drive Specifioations |  |
| :---: | :---: |
| Permissible Frequency | $50 / 60 \mathrm{~Hz} \pm 5 \%$ |
| Encoder Resolution / Feedback Resolution | 2500 lines / 10000 ppr |
| Control of Main Circuit | SVPWM (Space Vector Pulse Width Modulation) Control |
| Tuning Modes | Easy / Auto / Manual |
| Dynamic Brake | Built-in control |
| Analog Monitor Outputs (2) | Monitor signal can be set by parameters (Output voltage range: $\pm 8 \mathrm{~V}$; Resolution: $12.8 \mathrm{mV} /$ count) |
| 8 Programmable Digital Inputs (45 selectable functions) | Servo enable, Alarm reset, Gain switching, Pulse counter clear, Fault stop, CW/CCW over-travel |
|  | Internal parameter selection, Torque limit activation, Velocity limit activation, Control mode selection |
| Scalable Encoder Output | Encoder signal output $A, / A, B, / B, Z / Z$, Line Driver |
| 5 Programmable Outputs (9 selectable indicators) | Servo ready, Servo On, Low velocity, Velocity reached, In Position, Torque limiting, Servo fault, Electromagnetic brake control, Home search completed |
| Communication Interface | RS-232 / RS-485 / RS-422 / Modbus ASCII \& RTU up to 115k Baud |
| Protective Functions | Overcurrent, Overvoltage, Undervoltage, Overload, Excessive velocity/position error, Encoder error, Regeneration error, Communication error |
| Installation Site | Indoor location (free from direct sunlight), no corrosive liquid and gas (far away from oil mist, flammable gas, dust) |
| Altitude | 1000 m [ 3281 tt ] above sea level - maximum |
| Operating Temperature | 0 to $55^{\circ} \mathrm{C}$ [ 32 to $131^{\circ} \mathrm{F}$ ] (If operating temperature is above $55^{\circ} \mathrm{C}$, forced cooling is required) For long-term reliability, the ambient temperature of SureServo systems should be under $45^{\circ} \mathrm{C}\left(113^{\circ} \mathrm{F}\right)$. |
| Storage Temperature | $-20^{\circ}$ to $65^{\circ} \mathrm{C}\left(-4^{\circ}\right.$ to 1499 F$)$ |
| Humidity | 0 to 90\% (non-condensing) |
| Vibration | $9.81 \mathrm{~m} / \mathrm{s}^{2}$ (1G) less than $20 \mathrm{~Hz}, 5.88 \mathrm{~m} / \mathrm{s}^{2}(0.6 \mathrm{G}) 20$ to 50 Hz |
| Protection | IP 20 |
| Agency Approvals | CE; UL listed (U.S. and Canada) |

## Sureservo AC Servo System Wiring

## Standard wiring examples

This wiring diagram shows basic Wiring only, and additional wiring configurations are possible for some I/O.
Refer to the "Installation and Wiring" chapter of the User Manual for more detailed wiring information.
Position (Pr \& Pt) Control Modes $\quad \begin{aligned} & \dagger \text { Remove Jumper at } D \\ & \text { if using External Resistor }\end{aligned}$

* Use connection kit part \#s ZL-RTB50 \& ZL-SVC-CBL-50(-x) for CN1 terminal connections.
** Use cable part \# SVC-Exx-0x0 for CN2 terminal connections.
*** Use cable part \# SVC-MDCOM-CBL for CN3 terminal Modbus network connections.

## Sure servo AC Servo System Wiring

## Standard wiring examples (continued)

This wiring diagram shows basic wiring only, and additional wiring configurations are possible for some i/O.
Refer to the "Installation and Wiring" chapter of the User Manual for more detailed wiring information.

## Velocity and Torque Control Modes

$\dagger$ Remove Jumper at D if using External Resistor

* Use connection kit part \#s ZL-RTB50 \& ZL-SVC-CBL-50(-x) for CN1 terminal connections.
** Use cable part \# SVC-Exx-Ox0 for CN2 terminal connections.
*** Use cable part \# SVC-MDCOM-CBL for CN3 terminal Modbus network connections.

## Sure servo AC Servo System Accessories

## Accessories

## External Regeneration Resistors

Use external resistors to provide additional regenerative capacity and to dissipate heat away from the servo drive.

| Part Number | Resistance | SureServo Drives | Price |
| :--- | :---: | :---: | :---: |
| GS-25PO-BR | $40 \Omega$ | SVA-2040 | $\$ 75.00$ |
| GS-2010-BR-ENC | $20 \Omega$ | SVA-2100, SVA-2300 | $\$ 223.00$ |

## AC Line Filters

Input EMI filters reduce electromagnetic interference or noise on the input side of the servo drive. They are required for CE compliance and recommended for installations prone to or sensitive to electromagnetic interference.

| SureServo Drives | AC Input Power | EMI Filter Pating | EMI Filter Part Number | Price |
| :---: | :---: | :---: | :---: | :---: |
| SVA-2040 | Single-Phase | 250V, 1-phase, 20A | 20DRT1W3S | \$76.00 |
|  | Three-Phase | 250V, 3-phase, 10A | 10TDT1W4C | 881.00 |
| SVA-2100 | Single-Phase | 250V, 1-phase, 20A | 20DRT1W3S | 876.00 |
|  | Three-Phase | 250V, 3 -phase, 10A | 10TDT1W4C | 58.00 |
| SVA-2300 | Three-Phase | 250V, 3 -phase, 26A | 26TDT1W4C | \$113.00 |
|  | Note: These EMI Filters are electrically Compatible with the SureServo drives. however, they are intended to be mounted next to the servo drive. Do not mount the fluter under the drive. The drive mounting holes on these units are intended to be USED only with Automationdirect's line of VFDs. |  |  |  |

## Edison Fuses \& Fuji Contactors

| SureServo Drives | Input Type | Input Voltage | Edison Fuse <br> - Class CG | Price* | Contactor** | Price |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| SVA-2040 | Main Input Power | 230V 3-Phase | HCTR4 | \$86.00 | SC-E02-xxx | varies |
| SVA-2100 |  |  | HCTR7-5 | \$98.00 | SC-E03-xxx | varies |
| SVA-2300 |  |  | HCTR15 | \$80.00 | SC-E04-xxx | varies |
| SVA-2040 |  | 230V 1-phase | HCTR4 | \$86.00 | SC-E02-xxx | varies |
| SVA-2100 |  |  | HCTR10 | \$87.00 | SC-E03-xxx | varies |
| SVA-2040 SVA-2100 SVA-2300 | Control Input Power | 230 V 1-phase | HCTR2-5 | \$89.00 |  |  |
| * Fuses are sold in packages of 10. <br> ** Note: For contactors, xxx = coil voltage (for example, SC-EO2-220VAC). |  |  |  |  |  |  |

Resistor GS-25PO-BR

AC Line Filter 10TD1W4C

The SureGear PGA, PGB and PGD series easily mates to SureServo motors. Everything you need to mount your SureServo motor is included!
It is the perfect solution for applications such as gantries, injection-molding machines, pick-and-place automation, and linear slides.

Quickly and easily configure a system online: http://www.sureservo.com/gearbox/selector

# Suregear Precision Servo Gearboxes 

## SureGeare Servo Gearbox Overview

## PGA In-line Series

The SureGear PGA series of high-precision servo gear reducers is an excellent choice for applications that require good accuracy and reliability at an exceptional value. This in-line planetary gear reducer has a thread-in mounting style, along with a level of precision and torque capacity that is best in its class. Offered in a concentric shaft design with a maximum seven arc-min backlash rating, the SureGear PGA series is an accurate, high-performance, and cost effective solution for any OEM.
The machining quality of the SureGear PGA helical planetary gears provides a very quiet and more efficient reducer than other competitive products that are similarly priced. The SureGear PGA series easily mates to SureServo motors, and is the perfect solution for applications such as gantries, injection-molding machines, pick-and-place automation, and linear slides.

## PGB Right-angle Series

The SureGear PGB series of high-precision right-angle servo gear reducers is an excellent choice for applications that require a more compact footprint.
The PGB right-angle planetary gear reducers offer similar technical specifications to the PGA series in-line gear reducers, and provides the customer with an excellent solution when space and clearance requirements are limited.
Offered with a six arc-min backlash rating for 2 -stage and nine arc-min backlash for 3 -stage, the SureGear PGB series performs to OEMs' demanding expectations.

## PGD Hub Style In-line Series

The SureGear PGD series sets a new standard in applications requiring extremely high-torque ratings and rigidity. The compact design and hub-style output is ideal for equipment that requires highspeed, high-precision indexing movement. The remarkable torsion stiffness and the low backlash of the planetary gearing combine to provide outstanding positioning accuracy.
With a backlash rating less than 3 arc-minutes and exceptional torque handling capabilities, the PGD series offers a high performance robust planetary solution for OEM customers. The PGD reducer is often used for larger indexing applications and dial tables commonly found in packaging and filling equipment and assembly automation systems.

## Features

- Thread-in mounting style
- Best-in-class backlash
- Four gear ratios available (5:1, 10:1, 15:1, 25:1), Two additional for PGD models ( $35: 1$ and $50: 1$ )
- Mounting hardware included for attaching to SureServo motors
- Helical-cut planetary gears for quiet operation and reduced vibration
- Right-angle reducer utilizes a spiral bevel gear; motor can be located at a $90^{\circ}$ position from the reducer, providing a more compact footprint
- Uncaged needle roller bearings for high rigidity and torque
- Adapter bushing connection for simple and effective attachment to most servo motors
- High-viscosity, anti-separation grease does not migrate away from the gears; no leakage through the seal
- Maintenance free: No need to replace the grease for the life of the unit
- At nominal speed, service life is 20,000 hours
- Can be positioned in any orientation
- IP55 environmental rating
- 5 -year warranty

SureGear Servo Gearbox Replacement Parts

| Surchear ${ }^{\text {® Precision Scry }}$ Cearboxes - Replacement Paris |  |  |
| :---: | :---: | :---: |
| Part Number | Price | Description |
| PG050-KEY | \$4.00 | Output Shaft Key, replacement, $4 \times 4 \times 14 \mathrm{~mm}$, for SureGear PGA050 series gearboxes. |
| PG070-KEY | \$4.00 | Output Shaft Key, replacement, $5 \times 5 \times 22 \mathrm{~mm}$, for SureGear PGA070 and PGB070 series gearboxes. |
| PG090-KEY | \$4.00 | Output Shaft Key, replacement, $6 \times 6 \times 28 \mathrm{~mm}$, for SureGear PGA090 and PGB090 series gearboxes. |
| PG120-KEY | \$4.00 | Output Shaft Key, replacement, $10 \times 8 \times 45 \mathrm{~mm}$, for SureGear PGA120 and PGB120 series gearboxes. |
| PG155-KEY | \$4.00 | Output Shaft Key, replacement, $12 \times 8 \times 65 \mathrm{~mm}$, for SureGear PGA155 and PGB155 series gearboxes. |
| PGA4-A5-BUSH | \$19.00 | Input Shaft Bushing, replacement, $28 \times 22 \times 30.5 \mathrm{~mm}$, for all SureGear gearboxes using SVL-210(B) and SVM-210(B) SureServo motors. |
| PGA6-BUSH | \$19.00 | Input Shaft Bushing, replacement, $38 \times 35 \times 36 \mathrm{~mm}$, for all SureGear gearboxes using SVM-220(B) and SVM-230(B) SureServo motors. |

[^0]:    * Available load inertia is calculated based on servo motor inertia using the formula: Available Inertia $=\left(5 \times\right.$ Motor Inertia - Gearbox Inertia) x (Gear Ratio) ${ }^{2}$ A 5:1 inertia mismatch is a good target for design purposes. Systems with lower or higher mismatch may be possible, depending on operating conditions.
